Idea

Project Cooking

1. The main idea of this project is based on cooking. In which a user creates and shares his recipes with all or with some specific user.

2. Without Login the Recipes can be seen by the Anonymous users by clicking on the Home tab on the navigation bar.

3. When someone opens the website at first then there are three options:

I) To check the recipes which have been shared with all.

II) To signup and create an account on the cooking website to be able to share one's own recipes with others.

III) To log in and get access to create recipes, rate recipes, check the recipes shared with yourself.

4. After Login you are redirected to the home screen Where you have two tabs under the Home navigation tab

i.e.

I) Shared with all: In this tab, the user gets to see the recipes which have been shared with all users.

II) Shared with me: In this tab, the user gets to see the recipes which have been shared with only the logged-in user (so this tab acts like a privately shared recipe).

5. On the Home page there is a button "Add Recipe" to add recipes, in which the user gets to input title, description, image & choose to select with whom he/she wants to share his/her newly created recipe.

Two types of users

1. People who want to learn cooking new in home
2. Other users are bachelor live alone want to cook
3. Student who study degree cooking

Functionalities

1. Good website with proper security
2. Good database to handle the data well maintained server to hosts the site traffic to handle best network.

Non- functional

Good chef well know recipe, social media handle for publishing marketing, recipe prepare kitchen, good writer, creative designer
